### CREDITS

The Department of Conservation thanks the USDA Natural Resources Conservation Service for providing modern soil survey maps and soil ratings. The Farmland Mapping and Monitoring Program relies on base information from the U.S. Geological Survey and the California Department of Water Resources for compilation of Important Farmland maps. Current aerial photos for the survey area have been provided by the High Altitude Missions Branch of NASA and private sector air photo libraries.

Data on areas participating in long term agricultural set aside programs is provided courtesy of the USDA Consolidated Farm Service Agency; and on lands converted to wildlife habitat by the U.S. Fish and Wildlife Service, California Department of Fish and Game, the Kern County Water Bank Authority, ARCO Products Co., and the Nature Conservancy.

The Department of Conservation also acknowledges the assistance it has received from map reviewers including county and city planning offices, county agricultural commissioners, Resource Conservation Districts, Natural Resources Conservation Service district conservationists, California Farm Bureau Federation, University of California Cooperative Extension, California Cattlemen's Association, local public interest groups, and building industry representatives. Many of these groups also participated in development of the Farmland of Local Importance definitions for their respective counties.

## EXECUTIVE SUMMARY

---

The California Department of Conservation biennially maps agricultural and urban land use covering 44.1 million acres of the state's private and public land. Maps and land use conversion statistics are reported to county and city officials to provide assistance in the planning and management of California's agricultural and open space resources.

The Department produces Important Farmland Series maps which cover areas with modern soil surveys and include eight map categories, including four agricultural categories. Also produced are Interim Farmland Series maps which cover agriculturally important areas without soil surveys and include six map categories, including two agricultural categories. (See pages 3-4 for further detail on map categories.) Acreage statistics for both types of maps, including land use conversions between map categories over the two-year reporting period, are reported in the biennial Farmland Conversion Report. The report also includes statewide, regional, and individual county land use conversion statistics and comparison of conversion activities between the previous and current reporting periods. The Farmland Conversion Report 1994-1996 represents the sixth biennial mapping cycle of the Farmland Mapping and Monitoring Program (FMMP), and presents the results for the 1994-1996 reporting period.

The 1996 update cycle saw the FMMP inventory expand into Lake and eastern Siskiyou counties, as well as a small portion of western Modoc County. This represented an addition of nearly 1.3 million acres of land, including over 168,000 acres of irrigated farmland. The seven-region conversion summaries contained in this report are based on a 47-county (42.8 million-acre) area inventoried during 1994 to 1996. The summaries do not include information from Lake County and the newly mapped portions of Modoc and Siskiyou counties which have no corresponding 1994 acreage information. Notable changes include:

- **Urbanization Rate Increases Slightly**

The overall urbanization rate between 1994 and 1996 was up eight percent from the previous reporting period, with 58,442 new acres of Urban and Built-up Land (Urban), compared to 54,307 new acres of Urban in 1992-94. A total of 17,982 acres (31 percent) of the new Urban came from irrigated farmland, up from 15,098 acres during 1992-94. The amount of Urban coming from marginal and nonirrigated land use categories in 1994-96 was 40,460 acres. Regional ranking for the conversion of all categories of land to Urban uses remained the same as that reported for 1992-94.

- **San Francisco Bay, Central Coast and Sierra Foothill Regions Show Sharp Urban Increases**

There were significant increases in the rate of urbanization in three California Regions compared to the 1992-94 reporting period. In the San Francisco Bay Region there were 9,457 acres of new Urban compared to 5,824 acres in the previous reporting period. The Central Coast Region experienced an increase in urbanization of 4,743 acres between 1994 and 1996, up from the 2,048 acres converted to Urban in 1992-94. The Sierra Foothill Region also saw a sharp jump in urbanization, experiencing an increase of 3,673 acres, compared to 1,614 acres during 1992-94. The Southern California Region, the San Joaquin and Sacramento valleys and the Northeastern Region, experienced slight declines in new Urban land compared to 1992-94.

- **Southern California Leads State in New Urban Acres**

Despite a decline in the rate of urbanization in the Southern California Region compared to 1992-94, the Region led the state with 23,142 new acres of Urban. Riverside County had the largest amount of new Urban, 6,379 acres, compared to all other project counties, with San Diego and San Bernardino following at 5,641 acres and 5,609 acres, respectively. The San Joaquin Valley Region ranked second in the amount of new Urban with 12,360 acres, led by Fresno County with 3,214 new Urban acres.

- **San Joaquin Valley Leads State in Conversion of Irrigated Farmland**

During the current reporting cycle, the San Joaquin Valley Region led the state in the conversion of irrigated farmland to new Urban, with 8,140 acres; Southern California ranked second with 4,860 acres. Conversion of irrigated farmland accounted for 66 percent of the total new Urban in the San Joaquin Valley Region. Fresno and San Joaquin counties led the state in the amount of irrigated land converted to Urban, with 2,136 and 1,807 acres respectively.

- **Total Irrigated Farmland Down Significantly**

The total amount of irrigated farmland in the project area declined by 65,827 acres, including the loss of nearly 38,000 acres of Prime Farmland. Loss of irrigated farmland was due to cessation of irrigation practice, conversion to wetland habitat, residential housing construction, development of golf courses, and urban commercial development. Large areas of Kern County were removed from the irrigated farmland categories due to land set aside for the Kern Water Bank.

- **North State Shows Increase in Irrigated Farmland**

All regions mapped had at least one county experiencing a gain in irrigated farmland. In northern California, Modoc and Tehama counties had a combined increase of over 7,000 acres of newly irrigated land. Pasture improvements, alfalfa plantings and additions to irrigated tree farms in these counties accounted for much of the new farmland acreage. The regions experiencing the smallest loss of irrigated land were the Sierra Foothills with a net loss of 929 acres, and the Central Coast with a net loss of 980 acres.

- **Land Committed to Nonagricultural Use Increases**

There was a 13 percent increase statewide in the amount of land reported as committed to future nonagricultural use, from 163,265 acres in 1992-94 to 184,588 acres in 1994-96. During the 1994-96 period there were 46,042 acres of irrigated land identified as committed to nonagricultural use, compared with 38,892 acres during the 1992-94 period.

## CHAPTER ONE

---

### INTRODUCTION

#### THE FARMLAND MAPPING AND MONITORING PROGRAM

The goal of the Department of Conservation's Farmland Mapping and Monitoring Program (FMMP) is to provide land use conversion information for decision makers to use in their planning for the present and future use of California's agricultural land resources. To meet this goal, FMMP provides maps and statistical data to the public, academia, and local, state, and federal governments on a biennial basis.

The FMMP was established in 1982 to continue the Important Farmland mapping efforts started in 1975 by the U.S. Department of Agriculture, Natural Resources Conservation Service (USDA-NRCS). The intent of the USDA-NRCS was to produce nationwide agricultural resource maps based on soil quality and land use. As part of this mapping effort, a series of definitions known as the Land Inventory and Monitoring (LIM) criteria were developed. The LIM criteria classified the land's suitability for agricultural production based on physical and chemical characteristics of soils and actual land use. Important Farmland maps are derived from USDA-NRCS soil survey maps using LIM criteria and the biennial monitoring conducted by FMMP to determine the irrigation, cultivation and conversion status of the land in its inventory area.

The FMMP compiles two kinds of farmland maps: Important Farmland maps for those areas that have modern soil surveys, and Interim Farmland maps for those areas lacking modern soil survey information and for which there is expressed local concern on the status of farmland.

The first Farmland Conversion Report was released in 1988 and detailed farmland changes from 1984 to 1986 for 38 counties, covering 30.3 million acres. Five subsequent reports have included additions to the project area as modern soil surveys became available. The present status of mapping, a total of 44.1 million acres in 48 counties, is shown in Figure 1.

Further information on the FMMP mapping procedures and detailed farmland map category definitions is available in the publication A Guide to the Farmland Mapping and Monitoring Program, or through the FMMP Web site at [www.consrv.ca.gov/dlrp/fmmp](http://www.consrv.ca.gov/dlrp/fmmp).

## **MAPPING CATEGORIES**

The following sections provide a brief description of mapping categories used on the Important Farmland and Interim Farmland maps. A more detailed explanation of the technical parameters which qualify lands to be classified in these categories is contained in the Department of Conservation's publication A Guide to the Farmland Mapping and Monitoring Program.

### **Important Farmland Map Categories**

Important Farmland maps for California are compiled from USDA-NRCS soil surveys and current land use information using eight mapping categories, generally explained below. The minimum mapping unit for each category is 10 acres unless otherwise noted.

#### **PRIME FARMLAND**

Farmland with the best combination of physical and chemical features able to sustain long term production of agricultural crops. This land has the soil quality, growing season, and moisture supply needed to produce sustained high yields. The land must have been used for the production of irrigated crops at some time during the two update cycles prior to the mapping date.

#### **FARMLAND OF STATEWIDE IMPORTANCE**

Farmland similar to Prime Farmland but with minor shortcomings, such as greater slopes or with less ability to hold and store moisture. The land must have been used for the production of irrigated crops at some time during the two update cycles prior to the mapping date.

#### **UNIQUE FARMLAND**

Farmland of lesser quality soils used for the production of the state's leading agricultural crops. This land is usually irrigated, but may include nonirrigated orchards or vineyards as found in some climatic zones in California. The land must have been cropped at some time during the two update cycles prior to the mapping date.

#### **FARMLAND OF LOCAL IMPORTANCE**

Land of importance to the local agricultural economy, as determined by each county's board of supervisors and a local advisory committee. See also Appendix D for each county's definition of Farmland of Local Importance.

#### **GRAZING LAND**

Land on which the existing vegetation is suited to the grazing of livestock. This category is used only in California and was developed in cooperation with the California Cattlemen's Association, the University of California Cooperative Extension Service, and other groups interested in knowing the extent of grazing activities. The minimum mapping unit for Grazing Land is 40 acres.

#### **URBAN AND BUILT-UP LAND**

Land occupied by structures with a building density of at least one unit to one and one-half acres, or approximately six structures to a ten-acre parcel.

**OTHER LAND**

Land which does not meet the criteria of any other category.

**WATER**

Water areas with an extent of at least 40 acres.

**Interim Farmland Map Categories**

Interim Farmland maps are prepared for specific agricultural counties lacking modern soil surveys, such as Butte and Colusa counties. The farmland categories used in these maps are not dependent on modern soil survey information; two categories of Interim Farmland are mapped in lieu of the categories of Prime Farmland, Farmland of Statewide Importance, Unique Farmland, and Farmland of Local Importance. The two Interim Farmland categories are explained below.

**IRRIGATED FARMLAND**

Cropped land with a developed irrigation water supply that is dependable and of adequate quality. Land must have been used for production of irrigated crops at some time during the two update cycles prior to the mapping date.

**NONIRRIGATED FARMLAND**

Land on which agricultural commodities are produced on a continuing or cyclic basis utilizing stored soil moisture.

The categories of Irrigated Farmland and Nonirrigated Farmland are designed to be easily upgraded to Important Farmland categories as the USDA-NRCS completes modern soil survey mapping and the technical soil information becomes available.

The categories of Grazing Land, Urban and Built-up Land, Other Land, and Water on Interim Farmland maps are identical to those for Important Farmland maps.

Kern and Tulare counties have USDA-NRCS soil surveys for only parts of their overall area, and for these two counties there is a combination of both Important and Interim categories. When modern soil surveys are completed for Interim sections of these counties, as well as Butte and Colusa counties, they will be scheduled for conversion to Important Farmland maps.

**Land Committed to Nonagricultural Use**

This category was developed in cooperation with local government planning departments and county boards of supervisors during the public workshop phase of FMMP's development in 1982. Land Committed to Nonagricultural Use (Committed) information is available as an overlay to the standard farmland information.

**LAND COMMITTED TO NONAGRICULTURAL USE**

Existing farmland and grazing land, and vacant areas, which have a permanent commitment for development.

Examples of Committed would include an area undergoing permanent infrastructure installation or for which bonds or assessments have been issued for public utilities. Committed areas represent planning areas for which there are commitments for future nonagricultural development which is not reversible by a simple majority vote by a city council or board of supervisors.

The FMMP is mandated to collect Committed information; however, cities and counties are not required to furnish this information and do so on a voluntary basis.

**CHANGES TO MAPPING IN 1996**Addition of Butte Valley-Tule Lake and Lake County Soil Survey Areas

As part of the 1996 Important Farmland map update new mapping was conducted to include the recently published Butte Valley-Tule Lake soil survey area. This added 348,615 acres to the Siskiyou County map area and 86,074 acres to the Modoc County map area. The Board of Supervisors in Siskiyou County requested a reevaluation of their Farmland of Local Importance definition, convened a Local Advisory Committee, and adopted a new definition. The Board of Supervisors in Modoc County determined that the current definition for Farmland of Local Importance was applicable to both western and eastern portions of the county. The full text of the Farmland of Local Importance definitions can be found in Appendix D.

Lake County was added to the Important Farmland mapping area in 1996, augmenting the FMMP mapping inventory by 850,982 acres. Map compilation also involved local agencies and other stakeholders in the development and approval of a Farmland of Local Importance definition. This definition was formally adopted by the Board of Supervisors in May 1998. The full text of Lake County's Farmland of Local Importance definition can be found in Appendix D.

Changes to County Lines, Map Projections and Analytical Methods

A number of substantive changes were made to the Important Farmland data structure and map production process during the 1994 to 1996 update. These changes were made to achieve better spatial uniformity between the Important Farmland data and that of other state and federal agencies, to allow for better

regional analyses, and to enable Important Farmland Maps to be produced in color for the first time.

When FMMP was established in 1982, geographic information systems (GIS) were still in their infancy. Computer processor speed, software capabilities and available plotting technology limited the options available for production of maps. The initial 38 Important Farmland maps were compiled on 1:100,000 mylar base maps produced by the U.S. Geological Survey (USGS). This process included the cartographic techniques of pen and ink drafting at 1:24,000, photographic scale reduction, scribing and eventual scanning to create a digital file. Counties added after this date were digitized directly from 1:24,000 paper maps, each county file being developed and maintained separately. Lack of edge matching of the individual county boundaries due to these early methods of map compilation meant that statistics, particularly for regional analyses, contained minor errors. Moreover, the map projection, computer software and hardware used to create the Important Farmland maps limited the ability to portray and analyze data regionally.

Enhancements in GIS software and hardware have allowed FMMP to make improvements to its earlier map design. Staff researched options and made changes to the maps as follows:

- Adopted a uniform California county line file and reconciled all 1994 and 1996 FMMP data to this line;
- Converted all data from two Universal Transverse Mercator map projections to a single Albers Equal Area projection to facilitate regional mapping and to fit more precisely with larger scale field sheets;
- Employed spatial analysis using an ellipsoidal rather than a planar system, accounting for curvature of the earth in acreage calculations; and
- Developed digital base maps from USGS data to support color map production .

These changes had a limited impact on the acreage statistics for each county and for the survey area as a whole. In total, the FMMP survey area acreage increased by 4,131 acres from the 42,805,718 acres reported in the 1992-1994 Farmland Conversion Report. Individual county statistics differed by an average of 0.082% for the combined effects of adopting the new county line, converting to the Albers projection and conducting area calculations using ellipsoidal methods.

For more detailed explanations of the changes made, please see Appendix C.

---

## CHAPTER TWO

---

### SUMMARY AND ANALYSIS

#### EXPLANATION OF TABLES

A summary of acreage in each category for all project counties appears in Tables 1 and 2 for 1994 and 1996, respectively. These tables also indicate the percentage of each county that is covered by FMMP maps. Figures for "Total County Area" in Tables 1 and 2 are derived from the digital county line file developed by the US Bureau of Reclamation and adopted by FMMP during the 1996 update. Areas that are not mapped by FMMP typically do not have modern soil surveys, are large public land holdings, or do not contain significant cultivated agricultural land uses (e.g. National Forest areas, San Francisco County, Alpine County).

Table 3 represents the summary of all Important Farmland conversions between 1994 and 1996. It is a summation of the individual county tables in Appendix A (A-1 through A-8, A-10 through A-42, A-45, and A-47). Table 3 does not include conversions for the Interim Farmland map sections of Butte, Colusa, Kern, and Tulare counties. Table 3 also does not include conversion numbers for Lake County or the additions to Siskiyou and Modoc counties.

The components of Table 3 and the individual County Land Use Conversion Tables are:

**Part I** lists acreage figures by category and shows gains, losses, and net changes from 1994 to 1996.

**Part II** lists acreage for cities and counties which elected to report on Land Committed to Nonagricultural Use. Not all project counties reported information for this table, and in some cases, information was reported for only one of the years inventoried. Data for Part II represents a cumulative total of reported acreage minus any acres that have already become urbanized.

**Part III** reports the amount of acreage converted from one land use category to another. Conversion data is determined on a category-to-category basis; eight categories and 56 conversion combinations are reported regarding land use change in areas covered by Important Farmland maps. Similarly, six categories and 30 conversion combinations are reported for areas covered by Interim Farmland maps.

TABLE 1

Notes to the Reader:

- "County Area Inventoried" represents those portions of counties covered by USDA-NRCS soil surveys and mapped by the Farmland Mapping and Monitoring Program. Total county area inventoried differs from previously reported acreage due to adoption of 1:24,000 digital county boundary file and conversion to Albers Equal Area Projection.
- Lassen, Plumas, and Sierra counties are included within the tri-county area referred to as "Sierra Valley" in the USDA-NRCS soil survey for that region.

Notes to the Reader:

- "County Area Inventoried" represents those portions of counties covered by USDA-NRCS soil surveys and mapped by the Farmland Mapping and Monitoring Program. Total county area inventoried differs from previously reported acreage due to adoption of 1:24,000 digital county boundary file and conversion to Albers Equal Area Projection.
- Lassen, Plumas, and Sierra counties are included within the tri-county area referred to as "Sierra Valley" in the USDA-NRCS soil survey for that region.
- The increased acreage in Modoc and Siskiyou Counties is due to addition of the Butte Valley-Tule Lake Soil Survey area in 1996.

Notes to the Reader:

1. This table includes acreage data for 47 counties. Conversion data for counties mapped using Interim Farmland categories (Butte, Colusa, portions of Kern and Tulare counties) are not included. Conversion data for areas added during the 1996 update (Butte Valley-Tule Lake area of Siskiyou and Modoc counties; and Lake County) are not included.
2. Siskiyou County Farmland of Local Importance was reevaluated and revised by the county during the 1996 update. This resulted in large-scale decreases in Grazing Land (-450,041 acres) and Other Land (-32,958 acres); and a corresponding increase in Farmland of Local Importance (+482,999 acres).

**CONVERSION SUMMARY**

## **ASSUMPTIONS IN ANALYSES**

The analyses of conversion data in this chapter are compiled from Part III of all tables in Appendix A. This includes the Interim farmland portions of Butte, Colusa, Kern, and Tulare counties, but does not include the 1.3 million-acre additions of Lake County and portions of Siskiyou and Modoc counties. The integration of Important and Interim Farmland figures in the project-wide and regional analyses result in larger conversion numbers than can be seen in Table 3 alone. The figures can be seen by region in the Regional Conversion Summary (Appendix B).

To facilitate general analyses, grouping of Important and Interim Farmland categories has been conducted and certain simplifying assumptions have been made. For example, Unique Farmland is considered to be an irrigated farmland category in these analyses, even though a small proportion of land within the Unique Farmland category supports high value nonirrigated crops, such as some coastal vineyards. Conversely, Farmland of Local Importance is considered to be a nonirrigated category although it also supports some irrigated pastures on non-Prime and non-Statewide Importance soils.

## **STATISTICAL NOTES**

### **Area Calculations**

The FMMP has adopted the Albers Equal Area Map Projection during this reporting period. This has resulted in a more accurate calculation of overall county acreage that differs slightly from those reported in the 1992-1994 conversion report. See previous section on Changes to Mapping and Appendix C for further details.

### **Residual Polygons**

The minimum mapping unit for all farmland categories, Other Land, and Urban and Built-up Land is 10 acres. For Grazing Land and Water the minimum mapping unit is 40 acres. Small residual polygons less than the minimum mapping unit are sometimes created during the map updating process. These residual polygons are too small to be shown on the Important and Interim Farmland maps and are, therefore combined with the most appropriate adjacent land use type on the map. These changes are statistically tabulated during computer processing and are reported as small conversions in the final land use conversion tables.

## PROJECT-WIDE CONVERSION SUMMARY

The rate of urbanization in the FMMP project area increased 8 percent (4,135 acres), between the 1992-94 and 1994-96 update cycle. During 1994-96 there were 58,442 acres of new Urban, compared to 54,307 acres during 1992-94. This increase was observed on irrigated farmland, dryland agriculture and grazing lands (Figure 2). The rate of urbanization on Other Lands declined by 2,570 acres compared to 1992-94. Urbanization of irrigated farmland categories increased from 15,098 acres in 1992-94, to 17,982 acres in 1994-96.

Note: New Urban acreage totaled 54,307 and 58,442 for the 1992-94 and 1994-96 update periods, respectively.

There was a net decrease of 65,827 acres in irrigated farmland between 1994 and 1996, compared with 70,361 acres lost in the previous update period (Figure 3). This "net loss" represents a 0.7 percent decline from the 8.91 million irrigated acres mapped in 1994.

**Notes:**

Net changes do not include large-scale conversions from Grazing Land (-450,041 acres) and from Other Land (-32,958 acres) to Farmland of Local Importance (+482,999 acres). These specific conversions are a result of adoption of a new Farmland of Local Importance definition by Siskiyou County during the 1996 update.

Net change in Urban is less than total new Urban due to agricultural and miscellaneous uses found within the Urban line in some counties

Aside from urbanization, irrigated farmland conversion occurred due to land lying fallow for three update cycles, conversions to low density residential "ranchette" developments, the development or expansion of confined livestock facilities, and land left idle for groundwater recharge.

Many acres of irrigated farmland which had been left idle since 1992 as a result of market or water supply issues, drainage and salinity problems, or other economic issues, were removed from irrigated categories during 1994-1996. Field mappers identified these idle lands for two update cycles (1990-92 and 1992-94) before removing them from irrigated categories in 1996. Tracking idle land through three update cycles is performed to minimize the effects of crop rotation cycles that leave the land fallow for a number of

seasons. Should any of this land become irrigated in the future, it will be shown as a conversion to irrigated farmland.

Prime Farmland, on soil with the best physical and chemical characteristics for agricultural production, accounted for more than 57 percent of the net irrigated farmland losses in 1994-96 (37,516 acres). During the 1992-94 period, Prime Farmland accounted for approximately 75 percent (43,904 acres) of the irrigated farmland loss. During the current cycle more than half of the net loss of Prime Farmland was conversion to Farmland of Local Importance, primarily because the land had been left idle or used for dryland farming for three update cycles. More details on these changes can be seen in the individual county tables and the following regional analysis.

## **REGIONAL CONVERSION SUMMARY AND RANKING**

The FMMP project counties were aggregated into seven regions (Figure 4) based on climate and geography, to examine the relative amount of change in different parts of the state. The most important types of conversion were summarized for each region and are shown in Appendix B. Regional rankings of Appendix B data are shown in Tables 4 and 5.

The Southern California Region continues to be the most active in terms of overall urbanization, with 23,142 acres (40 percent) of new Urban. About 21 percent of new Urban in this region was located on irrigated farmland, with the remainder coming from areas of native vegetation, dryland farming, and grazing. The Region had a net loss of almost 20,000 acres of irrigated farmland during the 1994-96 period, down somewhat from the 24,000 acres of irrigated land lost between 1992-94.

The San Joaquin Valley Region, although second in overall urbanization (12,360 acres or 21 percent), ranked first in conversion of irrigated farmland. A total of 8,140 acres of new Urban occurred on irrigated farmland in this region, which is an increase from the 6,869 acres reported in 1992-94. The Southern California Region ranked second in the conversion of irrigated farmland to Urban, with 4,860 acres, which was up slightly from the 4,413 acres of irrigated land converted to Urban in 1992-94.

The San Joaquin Valley Region led the state with a 42,858 acre net loss of irrigated farmland. This loss was substantially more than the 25,152 acres lost between 1992-94. Conversely, Southern California's loss of 19,836 acres in 1994-96 was somewhat lower than the 23,848 acres lost between 1992-94.

The San Francisco Bay Region accounted for 9,457 acres (16 percent) of new Urban in the project area, ranking third in overall urbanization. Its growth rate was up 62 percent from the 5,824 new Urban acres reported for the previous

update cycle. About 18 percent of the new Urban in the Region occurred on irrigated farmland.

In the Sacramento Valley Region urban expansion totaled 5,046 acres, down slightly from 5,290 acres in the previous reporting cycle. The source of nearly 30 percent of 1994-96 new Urban was irrigated farmland. There was an overall net loss of 4,745 acres of irrigated land in the region for the current reporting period compared to 11,030 acres in 1992-94.

The three remaining regions of the state, Central Coast, Northeastern, and Sierra Foothill, accounted for 14 percent (8,437 acres) of all new Urban. Of these three regions, the Central Coast Region had the largest number of new Urban (4,743 acres), compared to the growth of 2,048 acres the region experienced between 1992-94. The Sierra Foothill Region experienced over twice the urban growth seen in the previous reporting period, with 3,673 acres in 1994-96 versus 1,614 acres in 1992-94. The counties of the Northeastern Region have had less than 200 acres of development meeting urban density criteria in each of the last two updates.

This reporting period again saw the Northeastern Region as the only region with a net increase in irrigated land. The region gained 5,509 new acres of irrigated land, primarily in Modoc County, with the expansion of irrigated pasture and cropland such as alfalfa.

## Notes to Reader:

FMMP project counties are grouped into regions as shown in Appendix B. Total mapped acreages are listed below. Information not included for newly mapped areas of Siskiyou and Modoc counties and for Lake County.

Southern California	8,748,776	Sierra Foothill	2,028,147
San Joaquin Valley	12,334,536	Sacramento Valley	7,387,155
Central Coast	5,352,500	Northeastern	1,952,042
San Francisco Bay	5,006,693		

Irrigated categories include Prime Farmland, Farmland of Statewide Importance, and Unique Farmland on Important Farmland maps; and Irrigated Farmland on Interim Farmland maps.

Nonirrigated categories include Grazing Land, Other Land, and Farmland of Local Importance on Important Farmland maps; and Grazing Land, Other Land, and Nonirrigated Farmland on Interim Farmland maps.

## COUNTY CONVERSION SUMMARY AND RANKING

The current reporting period shows that the counties leading the state in urbanization of irrigated land were in the San Joaquin Valley and Southern California (Table 6). Fresno County led the state in having the most irrigated farmland converted to Urban with 2,136 acres. San Joaquin County was second with 1,807 acres, and Riverside County was third with 1,642 acres of irrigated land converted to urban uses.

Southern California counties once again led the list of top 10 urbanizing counties during 1994-96, with 23,142 acres newly developed for Urban uses. Riverside County led all other counties in urbanization with 6,379 new Urban acres, down from 8,435 acres in 1992-94. Riverside's growth was chiefly new housing subdivisions in the Corona, Hemet, Beaumont, and Coachella Valley areas. New golf courses, a sports complex, landfills, and water treatment facilities also contributed to the county's urbanization. San Diego experienced substantial growth over the current reporting period, showing 5,641 new Urban acres, compared to 4,463 during 1992-94. Much of the county's new growth was in the suburbs around the City of San Diego. San Bernardino County increased from 4,710 new Urban acres during 1992-94 to 5,609 acres in 1994-96. Development was concentrated mainly in the southern part of the county where there was new housing and commercial expansion; an exception to this was the development of a 1,200 acre solar electricity plant in the desert northwest of Barstow.

In the San Joaquin Valley, Fresno County saw 3,214 new Urban acres during the current reporting period, up from 1,488 acres during 1992-94. Most of the new development was in the form of housing and light commercial construction, primarily in the Clovis area. San Joaquin County's 2,148 new Urban acres were primarily new housing developments around Stockton, Tracy and Manteca, as well as some commercial development and one new golf course.

The San Francisco Bay region had three counties with significant urban growth between 1994 and 1996. Contra Costa and Alameda counties combined for a total of 5,037 new Urban acres. Housing, commercial development, new schools and an airport contributed to the urban growth. Solano County showed a 2,320 acre increase of Urban, nearly ten times the growth it had in 1992-94. Housing, a new business park and other commercial development around Fairfield, Vacaville, Benicia, Cordelia, Suisun City and Dixon accounted for most of this growth.

In the northern foothills and Sacramento Valley, two counties stood out for their new urban growth. Sacramento County expanded its Urban acreage by 2,534 acres compared to 1,752 acres in 1992-94. Again, housing contributed

to the growth, although four new golf courses were developed in the county. Placer County's Urban acreage grew by 2,431, compared to 1,028 in 1992-94. Housing around Roseville, Rocklin and west of Folsom Lake was mainly responsible for this growth, as well as the expansion of Del Webb's Sun City in Roseville.

The counties with the greatest net loss of irrigated farmland were Kern, Kings and Riverside. In addition to new housing developments, much of the farmland converted in these counties was due to land lying fallow for six years. In Kern County, the creation of the Kern Water Bank was responsible for the conversion of over 6,000 acres of irrigated agriculture to the Grazing Land category.

Modoc and Tehama counties led the state with net gains in irrigated farmland. Modoc County's gain of 4,678 acres of new farmland was mainly due to new irrigated alfalfa and pastures. Tehama County's gain of 2,403 acres reflected new deciduous fruit orchards, field crops and a large eucalyptus grove planted for paper production northeast of Black Butte Lake.

**TABLE 6**

## LAND COMMITTED TO NONAGRICULTURAL USE

Counties and cities may voluntarily submit documentation to FMMP on Land Committed to Nonagricultural Use (Committed). This information is then made available as an overlay to the existing land use data. To date, jurisdictions in 36 of the 48 project counties have submitted information for this category.

Because the information is voluntarily submitted, includes areas which will change over a long time period, and includes both low- and high-density developments, Committed can only be seen as a general indication of expected urbanization trends.

Among the jurisdictions submitting Committed data, a total of 184,588 acres are slated for nonagricultural uses in the future (Table 7). Of these lands, 17 percent (31,748 acres) are currently mapped as Prime Farmland by FMMP, and 8 percent (14,294) are within other irrigated categories. Approximately 76 percent of the Committed (138,546 acres) is currently mapped as Farmland of Local Importance, Nonirrigated Farmland, Grazing Land, and Other Land.

These figures represent a 13 percent increase in Committed Land compared to those reported for the 1992-94 period. Committed Land located on Prime Farmland increased by 16 percent over the previous reporting period, and overall irrigated farmland Committed use rose by 18 percent.

**TABLE 7  
LAND COMMITTED TO NONAGRICULTURAL USE**

LAND COMMITTED TO NONAGRICULTURAL USE	1994 DATA		1996 DATA	
	ACRES	PERCENT	ACRES	PERCENT
FROM PRIME FARMLAND	27,230	17%	31,748	17%
FROM STATEWIDE, UNIQUE, IRRIGATED	11,662	7%	14,294	8%
FROM ALL IRRIGATED CATEGORIES	38,892	24%	46,042	25%
FROM OTHER LAND	48,731	30%	50,845	28%
FROM LOCAL, NONIRRIGATED, GRAZING	75,642	46%	87,701	47%
TOTAL COMMITTED LAND	163,265	100%	184,588	100%

**Note to Reader:**

Information on Land Committed to Nonagricultural Use is provided on a voluntary basis by cities and counties. Figures represent a cumulative total of all land reported as "Committed" minus those acres developed subsequent to reporting.

Notes to the Reader:

1. Total area inventoried differs from previously reported acreage due to adoption of 1:24,000 digital county boundary file and conversion to Albers Equal Area Projection.
2. Conversion to Farmland of Statewide Importance primarily due to correction made to soil unit identification on the Brentwood quadrangle.
3. Conversion to Farmland of Local Importance, Grazing Land and Other Land primarily due to map corrections to areas in Mt. Diablo State Park, in the vicinity of Danville, on the Diablo quadrangle and in other areas.

Notes to the Reader:

1. Total area inventoried differs from previously reported acreage due to adoption of 1:24,000 digital county boundary file and conversion to Albers Equal Area Projection.
2. Conversion to Grazing Land primarily due to land left idle for three update cycles; conversion to Unique Farmland due to corrections to soil unit alignment.
3. Conversion to Unique Farmland due to new orchards.
4. Conversion to Farmland of Local Importance primarily due to large areas of dryfarming and irrigated pasture.
5. Conversion to Unique Farmland due to irrigated agriculture in or adjacent to Chowchilla Prison.

LAND USE CATEGORY	Prime Farmland	Farmland of Statewide Importance	Unique Farmland	Farmland of Local Importance	Subtotal Important Farmland	Grazing Land	Total Agricultural Land	Urban and Built-Up Land	Other Land	Water Area	Total Converted To Another Use
Prime Farmland (2)	to: --	42	9	86	137	200	337	0	0	0	337
Farmland of Statewide Importance	to: 8	--	3	21	32	0	32	0	4	0	36
Unique Farmland	to: 0	16	--	0	16	0	16	0	0	0	16
Farmland of Local Importance (3)	to: 1,781	2,238	905	--	4,924	98	5,022	0	90	0	5,112
IMPORTANT FARMLAND SUBTOTAL	1,789	2,296	917	107	5,109	298	5,407	0	94	0	5,501
Grazing Land	to: 2	29	20	17	68	--	68	0	0	0	68
AGRICULTURAL LAND SUBTOTAL	1,791	2,325	937	124	5,177	298	5,475	0	94	0	5,569
Urban and Built-Up Land	to: 0	0	0	0	0	0	0	--	0	0	0
Other Land (4)	to: 2	10	0	1,527	1,539	0	1,539	0	--	62	1,601
Water Area (5)	to: 0	0	2	0	2	24	26	0	526	--	552
Acres from new soil survey (6)	to: 32,127	6,728	4,600	12	43,467	35,582	79,049	153	4,703	2,169	86,074
TOTAL ACREAGE CONVERTED	to: 33,920	9,063	5,539	1,663	50,185	35,904	86,089	153	5,323	2,231	93,796

Notes to the Reader:

1. Total area inventoried differs from previously reported acreage due to adoption of 1:24,000 digital county boundary file and conversion to Albers Equal Area Projection.
2. Conversion to Farmland of Statewide Importance primarily due to corrections made to soil unit identification on the Surprise Station quadrangle.
3. Conversion to Prime Farmland and Farmland of Statewide Importance primarily due to irrigated pasture and alfalfa fields.
4. Conversion to Farmland of Local Importance primarily due to hayfields on the Alturas quadrangle.
5. Conversion to Other Land due to dry lake status of Big Mud Lake.
6. Total acreage increased from 1994 to 1996 reflecting addition of areas covered by the new Butte Valley-Tule Lake Area soil survey.

Notes to the Reader:

1. Total area inventoried differs from previously reported acreage due to adoption of 1:24,000 digital county boundary file and conversion to Albers Equal Area Projection.
2. Conversion to Farmland of Statewide Importance primarily due to corrections made to soil unit identification on the Chualar quadrangle. Conversion to Grazing Land primarily due to land left idle for three update cycles or conversion to dryfarming.
3. Conversion to Prime Farmland primarily due to new vineyards. Conversion to Other Land primarily due to low density rural residential development and a gravel mine.

Notes to the Reader:

1. Total area inventoried differs from previously reported acreage due to adoption of 1:24,000 digital county boundary file and conversion to Albers Equal Area Projection.
2. Conversion to Farmland of Statewide Importance due to map changes resulting in Prime Farmland parcels smaller than the ten acre minimum size and absorption into the adjacent category.
3. Conversion to Farmland of Local Importance primarily due to dryfarming in the Lake Perris area.
4. Conversion to Other Land primarily due to abandoned orchards in the southwestern portion of the county and low density rural residential development countywide.
5. Conversion to Prime Farmland due to orchards on the Hemet and McCoy Wash quadrangles.

Water Area to:	0	0	0	0	0	0	0	0	0	--	0
TOTAL ACREAGE CONVERTED to:	608	161	2,179	1,380	4,328	23	4,351	2,148	847	28	7,374

Notes to the Reader:

1. Total area inventoried differs from previously reported acreage due to adoption of 1:24,000 digital county boundary file and conversion to Albers Equal Area Projection.
2. Conversion to Unique Farmland primarily due to pastures converted to vineyards on the Lodi North, Lockeford, Clements, Waterloo and Linden quadrangles.

Notes to the Reader:

1. A new definition for Farmland of Local Importance was adopted during the 1996 update process. The new definition includes areas of irrigated pastures on non-Prime Farmland and non-Farmland of Statewide Importance, unirrigated grains, agricultural preserves, areas enrolled in the Conservation Reserve Program, General Plan Prime Farmland areas, and other agriculturally important areas. An additional 23,935 acres of Agricultural Preserve Lands exist outside the Scott, Shasta, Butte, Tule Lake soil survey areas. See Appendix D for detailed definition.
2. Total area inventoried differs from previously reported acreage due to adoption of 1:24,000 digital county boundary file and conversion to Albers Equal Area Projection. Total acreage increased from 1994 to 1996 reflecting addition of areas covered by the new Butte Valley-Tule Lake Area soil survey.
3. Conversion to Farmland of Local Importance due to adoption of new definition; conversion to Other Land due to Grazing Land polygons less than 40 acres as a result of the new definition.
4. Conversion to Farmland of Local Importance due to adoption of new definition; conversion to Grazing Land due to verification of grazing activities.

Grazing Land	to:	188	76	264	--	264	300	573	0	1,137
AGRICULTURAL LAND SUBTOTAL		803	159	962	582	1,544	482	4,306	0	6,332
Urban and Built-Up Land	to:	0	0	0	1	1	--	0	0	1
Other Land	to:	912	0	912	0	912	539	--	0	1,451
Water Area	to:	0	0	0	0	0	0	0	--	0
TOTAL ACREAGE CONVERTED	to:	1,715	159	1,874	583	2,457	1,021	4,306	0	7,784

Notes to the Reader:

1. Total area inventoried differs from previously reported acreage due to adoption of 1:24,000 digital county boundary file and conversion to Albers Equal Area Projection.
2. Conversion to Other Land primarily due to wetlands in the Department of Fish and Game's Little Dry Creek Unit.

Notes to the Reader:

1. Total area inventoried differs from previously reported acreage due to adoption of 1:24,000 digital county boundary file and conversion to Albers Equal Area Projection.
2. Conversion to Grazing Land due to verification of grazing activities and to Other Land primarily due to land fallowing for the Kern Water Bank. Both conversions are in the Buttonwillow-Bakersfield-Taft area.
3. Conversion to Prime Farmland and Unique Farmland primarily due to new irrigated agriculture on the Pyramid Hills, Lost Hills, Cummings Mountain, Little Buttes and Rosamond quadrangles.

### CHANGES TO COUNTY LINES, MAP PROJECTIONS AND ANALYTICAL METHODS

#### County Line File

An informal survey of state and federal GIS users was conducted in 1997 to determine if a standard or commonly used digital county boundary file existed for the State of California. Results indicated that no standard county boundary file is used by all agencies, but the most commonly used county boundaries for detailed mapping were in a file developed by the U.S. Bureau of Reclamation (USBR) in 1992. The USBR's county boundaries were digitized from USGS 1:24,000 topographic maps.

The FMMP staff tested the USBR file to determine how well it fit the original USGS quadrangles from which it was derived. Tests were made along boundaries that were particularly complex, such as coastlines, rivers, harbors, and where multiple county boundaries merge. The USBR file proved to be an accurate representation of the original 1:24,000 USGS boundaries.

There were, however, a number of places where the USBR file diverged substantially from other published map sources, including the 1:100,000 USGS base maps that FMMP had used for compiling Important Farmland maps. Research into each of these discrepancies found that some county lines had been modified by legislation, by changes to river courses, or for other reasons. These modifications were incorporated into the USBR county line file and the results were transmitted to the USBR.

The impact of adopting the new county line file was small in most counties, but was relatively large in the counties where the lines had legally changed. The significance of these changes are summarized below:

- **Butte County and Glenn County**

Differences were noted between FMMP's existing county line and the USBR county line related to changes in the course of the Sacramento River. Several sources were consulted (agencies in Butte County, Glenn County, and the State of California, and various USGS map references) with no clear indication of which boundary line was more current. Since there was no authoritative answer, it was determined

that FMMP would keep its current county line until more definitive information could be obtained. This line reflects the 1:100,000 USGS maps compiled in the early 1980s.

- **Orange County and Riverside County**

In 1997 a public comment was received by FMMP describing a minor boundary adjustment that had been made between the two counties. Upon reviewing the Government Code section 23130 which contains the legal description of the county line, it was confirmed that a change had occurred. The county line adjustment reflecting the Government Code description was adopted by FMMP for both Orange and Riverside counties.

- **Santa Cruz and Santa Clara County**

After reviewing the legal description in Government Code sections 23143 and 23144 for both counties, it was determined that FMMP and USBR were both using outdated boundaries. After verifying that the newly released USGS 1:24,000 quadrangles reflected the legal description, a new county line was digitized from the new quadrangles for Santa Clara and Santa Cruz counties.

- **Ventura County and Kern County**

The USBR county line file deviated from the FMMP county line in the northeast corner of Ventura County along the border shared with Kern County. The Government Code section 23130 legal description matched the USBR county line and the latter line was adopted.

### **Adoption of the Albers Equal Area Projection**

Important Farmland maps were originally compiled and published using USGS 1:100,000 mylar base maps. The USGS maps published at this scale utilize the Universal Transverse Mercator (UTM) projection, and hence UTM (zones 10 and 11), was adopted by FMMP.

The UTM is a cylindrical projection which distorts area and does not perfectly align with the conic projections of the 1:24,000 maps used by FMMP field personnel and by many program stakeholders. Also, because the UTM projection splits California into two zones, analysis and portrayal of the entire state at one time becomes problematic.

A number of sources were used to assess projection alternatives. The Albers Equal Area projection was chosen due to its area preserving properties for area calculations, ease of regional and statewide analyses, and its common use by other agencies.

### **Ellipsoidal Calculations**

The acreage statistics in this report are generated from a spatial database by calculating and summing the polygons within each Important Farmland map. The analytic software allows the option to calculate area either using planar or ellipsoidal mathematics. Planar analysis assumes a 'flat earth' while ellipsoidal analysis uses mathematical models of the earth's shape in the determination of area. Ellipsoidal calculations take the map projection parameters into account and are considered to be more accurate when larger geographic areas are analyzed. Due to the greater accuracy of this method, FMMP has adopted the use of ellipsoidal calculations for all spatial database analyses.

### **Color Map Production**

Until 1996, Important Farmland maps were published as blueprints, made from translucent plots of FMMP data taped to USGS 1:100,000 mylar base maps. These maps, while within budgetary resources, were difficult to read because each map polygon was labeled with small text to indicate its category. The development of large-format inkjet plotting technology has allowed FMMP to produce color maps for about the same price as the blueprint process.

Digital base maps, including roads, place names, and other cultural information, were required to create a useful color map. Staff reviewed existing commercial and governmental digital map options. Cost, copyright and quality control issues led to the decision to scan and register an existing set of USGS 1:100,000 negatives in-house. These maps contained the needed base information and could be edited and updated with the same software used to register them in place.

A projective warping algorithm was used to optimize the fit of the scanned base maps to control points in the Albers Equal Area projection. Registration measurements were conducted on each map to ensure that specific spatial accuracy criteria were met, as compared to a 1:24,000 geographic grid. Following registration, editing to improve readability and to update cultural features was undertaken. The resultant base map was combined with color-filled Important Farmland data and county-specific legend information. Final maps were formatted to fit the plotter, with each county taking up to three sheets at either a scale of 1:100,000 or 1:120,000.

## **APPENDIX D**

---

### **FARMLAND OF LOCAL IMPORTANCE DEFINITIONS**

Farmland of Local Importance is land of importance to the local economy, as defined by each county's local advisory committee and adopted by its Board of Supervisors. Farmland of Local Importance is either currently producing, or has the capability of production, but does not meet the criteria of Prime Farmland, Farmland of Statewide Importance, or Unique Farmland. Authority to adopt or to recommend changes to the category of Farmland of Local Importance rests with the Board of Supervisors in each county.

#### **ALAMEDA**

The Board of Supervisors determined that there will be no Farmland of Local Importance for Alameda County.

#### **AMADOR**

Land that is currently in agricultural production and that is providing an economic return equal to that from the prime soil types.

#### **CONTRA COSTA**

The lands within the Tassajara area, extending eastward to the county boundary and bordered on the north by the Black Hills, the Deer, Lone Tree and Briones Valleys, the Antioch area, and the Delta. These lands are typically used for livestock grazing. They are capable of producing dryland grain on a two year summer fallow or longer rotation with volunteer hay and pasture. The farmlands in this category are included in the U.S. Natural Resources Conservation Service's Land Capability Classes I, II, III, and IV, and lack some irrigation water.

#### **EL DORADO**

Lands that do not qualify for the Prime, Statewide, or Unique designation but are considered Existing Agricultural Lands, or Potential Agricultural Lands, in the Agricultural Land Element of the County General Plan. Timberlands are excluded.

## **FRESNO**

All farmable lands within Fresno County that do not meet the definitions of Prime, Statewide, or Unique.

## **GLENN**

Local Importance (L): All lands not qualifying for Prime, Statewide, or Unique that are cropped on a continuing or cyclic basis (irrigation is not a consideration). All cropable land within Glenn County water district boundaries not qualifying for Prime, Statewide, or Unique.

Local Potential (LP): All lands having Prime and Statewide soil mapping units which are not irrigated, regardless of cropping history or irrigation water availability.

## **IMPERIAL**

Unirrigated and uncultivated lands with Prime and Statewide soils.

## **KERN**

The Board of Supervisors determined that there will be no Farmland of Local Importance for Kern County.

## **KINGS**

Land that supports the following commercial agricultural activities: dairies, confined livestock, and poultry operations.

## **LAKE**

Lands which do not qualify as Prime Farmland or Farmland of Statewide Importance or Unique Farmland, but are currently irrigated pasture or nonirrigated crops; and unirrigated land with soils qualifying for Prime Farmland or Farmland of Statewide Importance. Areas of unirrigated Prime and Statewide Importance soils overlying ground water basins may have more potential for agricultural use. (This definition was adopted by the Board of Supervisors in May 1998).

## **LOS ANGELES**

Producing lands that would meet the standard criteria for Prime or Statewide but are not irrigated.

## **MADERA**

Lands that are presently under cultivation for small grain crops, but are not irrigated. Also lands that are currently irrigated pasture, but have the potential to be cultivated for row/field crop use.

## **MARIN**

Land which is not irrigated, but is cultivated; or has the potential for cultivation.

## **MARIPOSA**

The Board of Supervisors determined that there will be no Farmland of Local Importance for Mariposa County.

## **MERCED**

Farmlands that have physical characteristics that would qualify for Prime or Statewide except for the lack of irrigation water. Also, farmlands that produce crops that are not listed under Unique but are important to the economy of the county or city.

## **MODOC**

Irrigated and dry cropland classified as Class III and Class IV irrigated land if water is or becomes available.

## **MONTEREY**

The Board of Supervisors determined that there will be no Farmland of Local Importance for Monterey County.

## **NAPA**

These farmlands include areas of soils that meet all the characteristics of Prime Farmland or of additional Farmland of Statewide Importance with the exception of irrigation. These farmlands include dryland grains, haylands, and dryland pasture.

## **NEVADA**

Farmlands that have physical characteristics that would qualify for Prime or Statewide except for the lack of irrigation water. Farmlands that produce crops that are not listed under Unique Lands but are important to the economy of the county are: Christmas trees, Sudan grass, Meadow hay, chestnuts, poultry houses and feedlots, improved dryland pasture (not rangeland), and irrigated pasture (it is under Statewide or Prime if soils are listed as such, otherwise as Local).

Also, lands that are legislated to be used only for agricultural (farmland) purposes, such as Williamson Act land in western Nevada County.

## **ORANGE**

The Board of Supervisors determined that there will be no Farmland of Local Importance for Orange County.

## **PLACER**

Farmlands not covered by the categories of Prime, Statewide, or Unique. They include lands zoned for agriculture by County Ordinance and the California Land Conservation Act as well as dry farmed lands, irrigated pasture lands, and other agricultural lands of significant economic importance to the County and include lands that have a potential for irrigation from Placer County water supplies.

## **RIVERSIDE**

Soils that would be classified as Prime and Statewide but lack available irrigation water. Lands planted to dryland crops of barley, oats, and wheat.

Lands producing major crops for Riverside County but that are not listed as Unique crops. These crops are identified as returning one million or more dollars on the 1980 Riverside County Agriculture Crop Report. Crops identified are permanent pasture (irrigated), summer squash, okra, eggplant, radishes, and watermelons.

Dairylands, including corrals, pasture, milking facilities, hay and manure storage areas if accompanied with permanent pasture or hayland of 10 acres or more.

Lands identified by city or county ordinance as Agricultural Zones or Contracts, which includes Riverside City "Proposition R" lands. Lands planted to jojoba which are under cultivation and are of producing age.

**SACRAMENTO**

Lands which do not qualify as Prime, Statewide, or Unique designation but are currently irrigated crops or pasture or nonirrigated crops; lands that would be Prime or Statewide designation and have been improved for irrigation but are now idle; and lands which currently support confined livestock, poultry operations, and aquaculture.

**SAN BENITO**

Land cultivated as dry cropland. Usual crops are wheat, barley, oats, safflower, and grain hay. Also, orchards affected by boron within the area specified in County Resolution Number 84-3.

**SAN BERNARDINO**

Farmlands which include areas of soils that meet all the characteristics of Prime, Statewide, or Unique and which are not irrigated.

Farmlands not covered by above categories but are of high economic importance to the community. These farmlands include dryland grains of wheat, barley, oats, and dryland pasture.

**SAN DIEGO**

Land that meets all the characteristics of Prime and Statewide, with the exception of irrigation.

Farmlands not covered by the above categories but are of significant economic importance to the county. They have a history of good production for locally adapted crops. The soils are grouped in types that are suited for truck crops (such as tomatoes, strawberries, cucumbers, potatoes, celery, squash, romaine lettuce, and cauliflower) and soils suited for orchard crops (avocados and citrus).

**SAN JOAQUIN**

All farmable land within San Joaquin County not meeting the definitions of "Prime Farmland," "Farmland of Statewide Importance," "Unique Farmland," or "Grazing Land." This includes land that is or has been used for irrigated pasture, dryland farming, confined livestock or dairy facilities, aquaculture or poultry facilities. It also includes soils previously designated by soil characteristics as "Prime Farmland," "Farmland of Statewide Importance," and "Unique Farmland" that has since become idle.

## **SAN LUIS OBISPO**

Local Importance (L): areas of soils that meet all the characteristics of Prime or Statewide, with the exception of irrigation. Additional farmlands include dryland field crops of wheat, barley, oats, and safflower.

Local Potential (LP): lands having the potential for farmland, which have Prime or Statewide characteristics and are not cultivated.

## **SAN MATEO**

Lands other than Prime, Statewide, or Unique that produce the following crops: oats, Christmas trees, pumpkins, dryland pasture, other grains, and haylands. These lands are not irrigated.

## **SANTA BARBARA**

All dryland farming areas and permanent pasture (if the soils were not eligible for either Prime or Statewide). Dryland farming includes various cereal grains (predominantly wheat, barley, and oats), sudan, and many varieties of beans. (Although beans can be high value crops the production areas are usually rotated with grain, hence the decision to include them under Local rather than Unique. Also, bean crop yields are highly influenced by climate, so there can be a wide variance in cash value.)

## **SANTA CLARA**

Small orchards and vineyards primarily in the foothill areas. Also land cultivated as dry cropland for grains and hay.

## **SANTA CRUZ**

Soils used for Christmas tree farms and nurseries, and that do not meet the definition for Prime, Statewide, or Unique.

## **SHASTA**

Dryland grain producing lands. Also included are farmlands that are presently irrigated but do not meet the soil characteristics of Prime or Statewide. The majority of these farmlands are located within the Anderson Cottonwood Irrigation District. These soils include Newton gravelly loam (8 to 15 percent slopes), Moda loam, seeped (0 to 3 percent slopes), Moda loam, shallow (0 to 5 percent slopes), and Hillgate loam.

## **SIERRA VALLEY**

Plumas County: Lands designated as "agricultural preserve" in the 1984 Plumas County General Plan and rangelands with a carrying capacity of 8 acres/animal month, as well as irrigable lands.

Lassen and Sierra counties: Farmlands that include areas of soils that meet all the characteristics of Prime or Statewide and which are not irrigated. Also, all dry land wheat, barley, oats, hayland, and pasture.

## **SISKIYOU**

Farmlands that include dryland or sub-irrigated hay and grain and improved pasture forage species; these dry farmed lands commonly have inclusions of uncultivated shallow, rocky, or steep soils; farmlands presently irrigated but which do not meet the soil characteristics of Prime Farmland or Farmland of Statewide Importance; areas currently shown as Prime Agricultural Land in the Siskiyou County General Plan; areas under contract as Agricultural Preserves in Siskiyou County (currently mapped only for the Scott-Shasta-Butte Valley and Tule Lake soil survey areas); other agricultural land of significant importance to the county (currently mapped only for the Scott-Shasta-Butte Valley and Tule Lake soil survey areas); areas previously designated by soil characteristics as Prime Farmland, Farmland of Statewide Importance, Unique Farmland, and Farmland of Local Importance that have since become idle; lands enrolled in the U.S. Department of Agriculture's Conservation Reserve Program. (This revised definition was adopted by the Board of Supervisors in May 1998).

## **SOLANO**

The Board of Supervisors determined that there will be no Farmland of Local Importance for Solano County.

## **SONOMA**

The hayland producing areas of the Santa Rosa Plains, Petaluma Valley, and Tubbs Island Naval Reservation. Additional areas also include those lands which are classified as having the capability for producing locally important crops such as grapes, corn, etc., but may not be planted at the present time.

Examples of these areas include the coastal lands from Fort Ross to Stewarts Point, areas surrounding Bloomfield, Two Rock, Chileno Valley, and areas of Sonoma Valley in the vicinity of Big Bend, Vineburg, and Schellville.

## **STANISLAUS**

Farmlands growing dryland pasture, dryland small grains, and irrigated pasture.

## **SUTTER**

The Board of Supervisors determined that there will be no Farmland of Local Importance for Sutter County.

## **TEHAMA**

All lands which are not included in Prime, Statewide, or Unique and are cropped continuously or on a cyclic basis (irrigation is not a factor). Also, all lands included in the L category which have soil mapping units listed for Prime or Statewide and which are not irrigated.

## **TULARE**

Lands that produce dryland grains (barley and wheat); lands that have physical characteristics that would qualify for "Prime" or "Statewide Important" farmlands except for the lack of irrigation water; and lands that currently support confined livestock, poultry, and/or aquaculture operations.

## **VENTURA**

Soils that are listed as Prime or Statewide that are not irrigated, and soils growing dryland crops--beans, grain, dryland walnuts, or dryland apricots.

## **YOLO**

Local Importance (L): cultivated farmland having soils which meet the criteria for Prime or Statewide, except that the land is not presently irrigated, and other nonirrigated farmland.

Local Potential (LP): Prime or Statewide soils which are presently not irrigated or cultivated.

## **YUBA**

The Board of Supervisors determined that there will be no Farmland of Local Importance for Yuba County.
